About arXiv

arXiv is a curated research-sharing platform whose purpose is to promote scientific innovation and equitable access to scholarship across the globe. Since our founding in 1991, arXiv has been free to use and open to all.

A pioneer of open access for close to 35 years, arXiv now hosts more than 2.6 million scholarly articles in eight subject areas. arXiv's community of volunteer moderators are experts in their fields who, along with our editorial team, ensure content quality while remaining dedicated to distribution at the speed-of-science. arXiv is a repository for articles and so much more: arXiv provides an article submission portal, a TeX compilation service, search and discovery tools, web distribution for human readers, API access, machine-readable data sets, and community-developed tools to enhance user experience.

Our emphasis on openness, collaboration, and scholarship — as well as the open access community that supports us — provides a strong foundation for arXiv to continue to grow and thrive.

Mission, Vision, and Values

Mission

arXiv is an open platform where researchers can share and discover new, relevant, and emerging science and establish their contribution to advancing research.

Vision

Our vision is for all researchers around the world to have immediate, free, and open access to established and emerging research in their field.

Values

arXiv is open, above all. The foundation of arXiv is based on open access, transparency, open mindedness, collaboration, and flexibility.

arXiv is a community. Our staff, institutional members, collaborators, moderators, authors, and readers all make arXiv possible — together, we are arXiv.

arXiv is passionate about science — and access to science. Science is for everyone, and arXiv makes sure it stays that way.

arXiv does more with less. To best serve researchers and research, arXiv runs lean — everything we have goes into the work.

arXiv values excellence. We meet the challenges of the future with a collective passion for our work and our community.

Messages from Leadership

The people who make arXiv work — our staff, our advisory councils, and our volunteer moderators — are, as a rule, passionate about improving arXiv and the open science ecosystem. Our leadership team is no exception.

Hear from our leadership team about arXiv, our mission, our progress in the past year, and our vision for the future.

Message from Greg Morrisett

Jack and Rilla Neafsy Dean and Vice Provost at Cornell Tech

arXiv is a critical service for scientists that greatly benefits society, and I am proud to be the steward of a platform that has been foundational in democratizing access to research, and to have Cornell Tech serve as its home. Much like Cornell Tech, new discoveries are taking place every day on arXiv, and we take great care with every decision we make around arXiv's growth, knowing we are responsible for a critical community resource. Making sure arXiv can grow sustainably and continue to serve the needs of the global research community is not an easy task. The explosive growth of machine learning and AI submissions to arXiv is pretty remarkable and makes it an important connection point for exciting emerging research. This growth also makes scaling up and building resilient technical systems immense – and immensely important – challenges to overcome. Ramin Zabih, arXiv's executive director, has met these challenges head-on, overseeing arXiv staff growth and spearheading ambitious projects, such as arXiv's experimental HTML, improving arXiv for researchers of all abilities. arXiv continues to receive generous additional funding from both the Simons Foundation and the National Science Foundation, which has been critical in allowing arXiv to grow and better serve the scientific community that relies on it. I am thankful for the unwavering support of the Simons Foundation and all of our members and donors. I am deeply grateful to the arXiv staff, volunteers, and the scientific community as a whole for ensuring that arXiv thrives well into the future.

Ramin Zabih

arXiv Executive Director and Professor of Computer Science at Cornell Tech

arXiv is essential to the work scientists do every day around the world. As arXiv's executive director, my goal is to preserve the core strengths that have made arXiv a vital resource for the global research community, while updating our platform to take advantage of the technologies that have emerged in the decades since its founding. In 2024 our top priority was to modernize arXiv's infrastructure by migrating it to the cloud. Over the past year, we've made excellent progress in the modernization project. We made a number of significant improvements, the most visible of which was to improve arXiv's accessibility to visually impaired researchers by adding support for HTML, which we first introduced at the end of 2023. In 2024, arXiv improved and refined the accessibility feature. Upgrading the technology behind a high-availability global platform with a 30-year history is a major undertaking - but it's essential for arXiv's long-term growth and sustainability. In 2025, we look forward to continuing our significant progress on the modernization project. In addition, arXiv has potential to play an exciting role in the burgeoning area of AI for science that is gathering considerable attention at present. We're especially grateful for the additional support from the Simons Foundation, as well as grant funding from the National Science Foundation that will allow arXiv, in collaboration with Cornell University computer science researchers, to achieve this important goal. We take our role as a leader of the open science movement very seriously and are grateful to our community for joining us on this journey to ensure scientific research papers remain openly accessible to all.

Stephanie Orphan

arXiv Program Director

I am so fortunate to work alongside talented, mission-driven individuals who are passionate about advancing science through openness, community, and reducing barriers to research. The dedication of our team and the generosity of our volunteers are genuinely inspiring and help arXiv meet its mission every day. Together, we are embracing change, tackling challenges head on, and working toward making science more accessible for all. It isn't always easy, but it is invariably rewarding.

Charles Frankston

arXiv Technical Director

arXiv is always evolving, and I'm proud to be part of the team making sure it has a solid foundation to support the needs of the scientific community now and in the future. The progress the arXiv development team has made in migrating arXiv from our legacy system to the cloud will make it possible for arXiv to continue to grow and evolve sustainably.

Steinn Sigurdsson

arXiv Scientific Director and Professor of Astrophysics at Penn State University

In October 2024, arXiv received the most submissions in a month, ever: 24,226. That's about 4,000 more than the 2023 record, and almost 7,000 more than the 2022 record. arXiv submissions will continue to grow — this just shows how much the scientific community relies on arXiv to share knowledge quickly and broadly.

Ralph Wijers

**Editorial Advisory Council Chair and Professor of High-Energy Astrophysics
at University of Amsterdam**

arXiv is essential to scientific research — and as the speed of scientific publishing increases, so does the editorial load on the arXiv staff and moderators. arXiv is updating its editorial committees so as to distribute this work across a substantive group of people rather than a single editor. In so doing, arXiv aims to increase the diversity of the editorial committees and moderator pools very significantly, to make them more representative of the global arXiv community.

Licia Verde

Science Advisory Council Chair, ICCUB Scientific Director and ICREA Professor of Physics and Astronomy at University of Barcelona

As a world leader in open access, arXiv is an essential tool for researchers across the globe. We have long been tasked with expanding our subject areas to support more scientists in additional research areas. Scalability is a challenge. However, this past year, arXiv has made significant progress that provides arXiv with the stable foundation it needs to expand its community and offerings. This is the beginning of a path that welcomes more researchers to share their work freely — a major milestone!

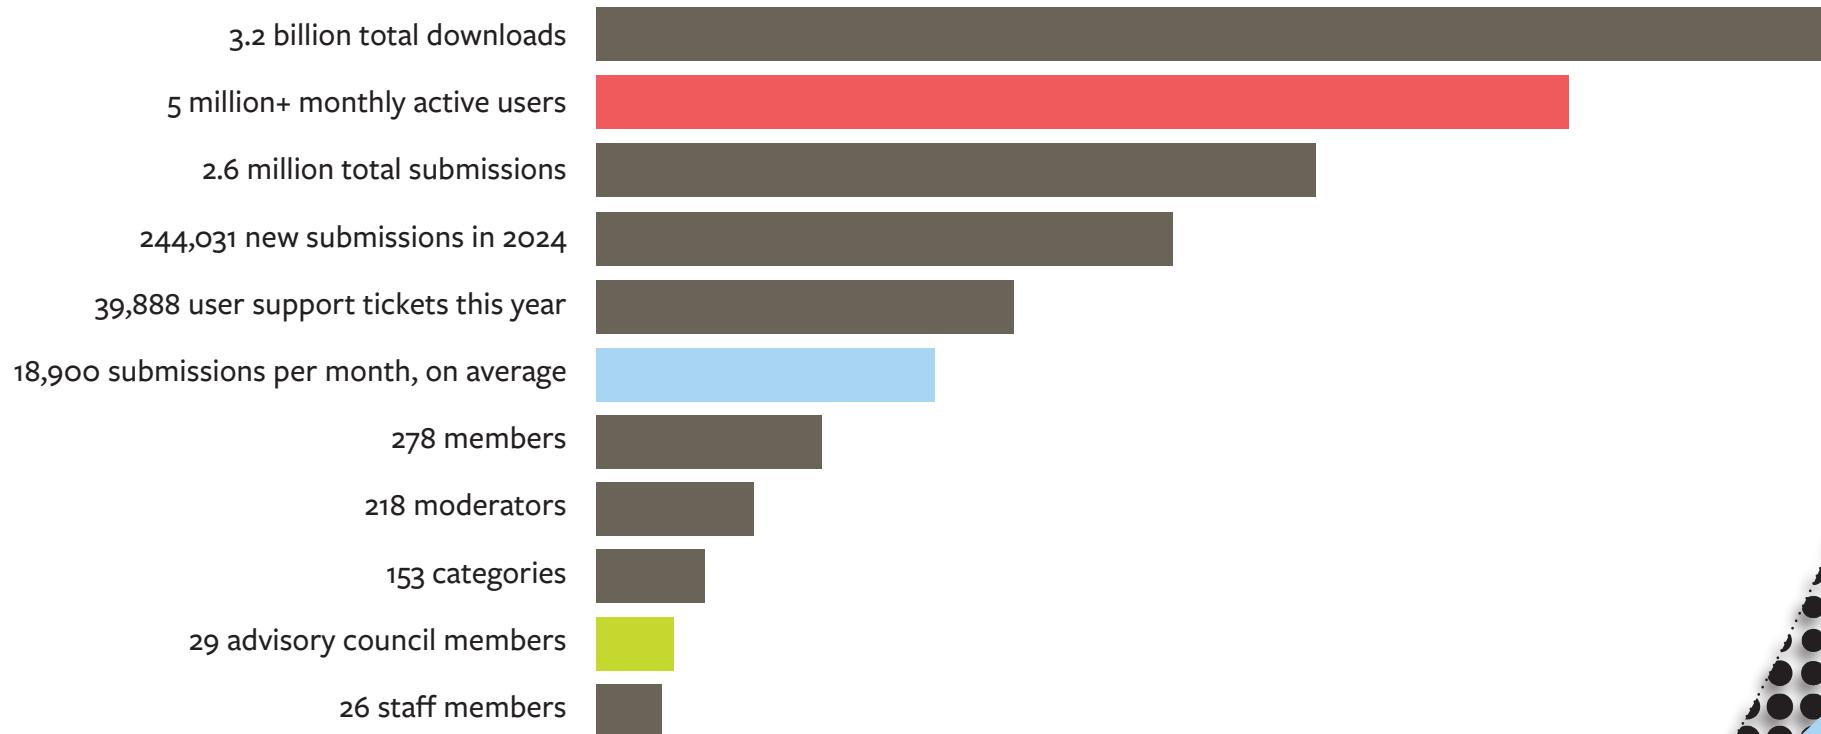

Maureen Walsh

Institutions Advisory Council Chair and Scholarly Sharing Strategist and Associate Professor at the Ohio State University Libraries

arXiv is open science. I am grateful to share in the success of arXiv and humbled by the dedication of the many people around the world that support arXiv and its future growth and sustainability, including my colleagues on the arXiv Institutions Advisory Council and the arXiv Advisory Board.

arXiv as an Organization

Open, Sustainable, Community Driven

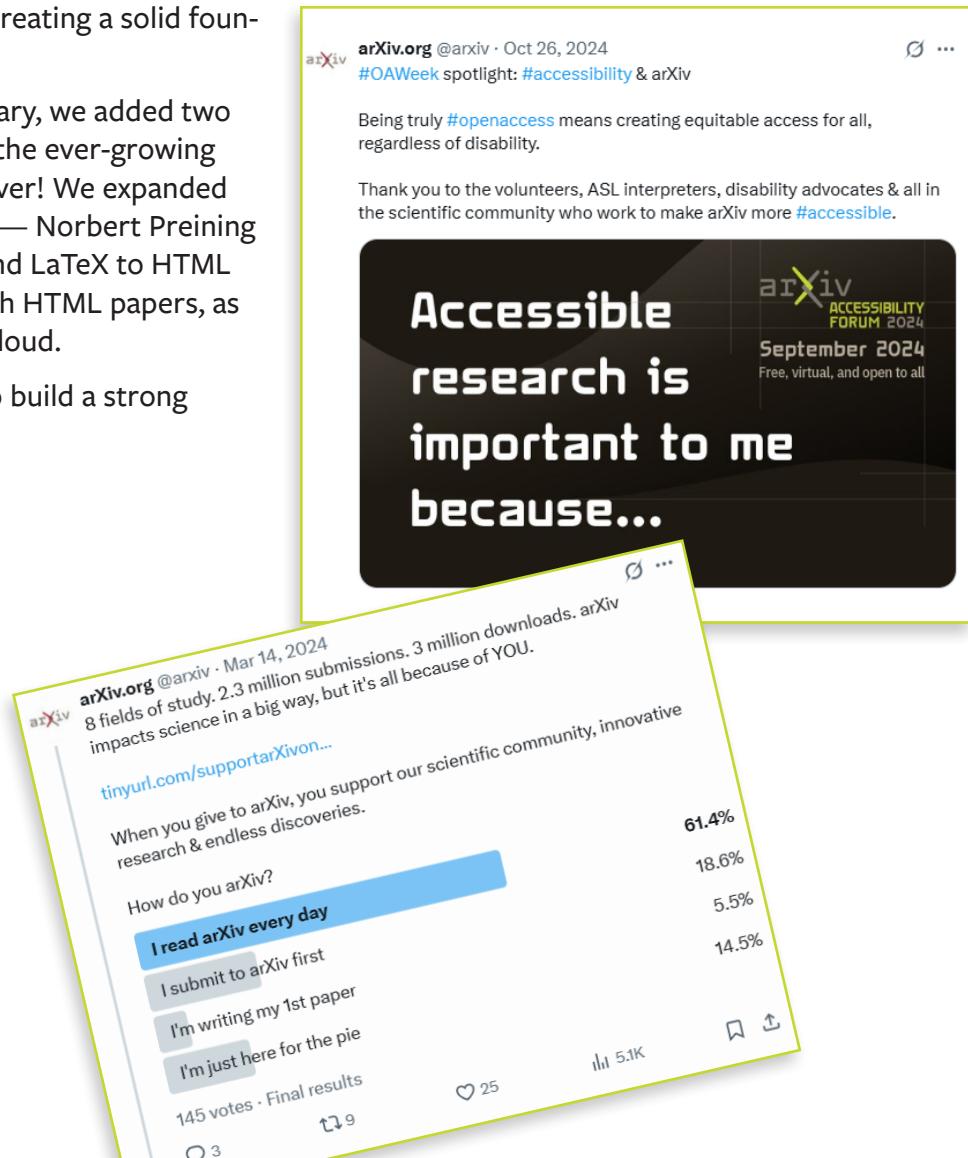

- Financial Overview
- Membership and Donation Report
- Generous Additional Funding
- arXiv's 2023 - 2025 Roadmap for Change

Charting a Course for Operational Excellence

In 2024 arXiv's leadership team and new governance were fully in place, creating a solid foundation for a year of building to support sustainable growth.

Staff headcount at arXiv grew in vital areas to support our needs. In January, we added two more members to the user support and editorial team to better manage the ever-growing submissions to arXiv — welcome to both Jamie Magyar and Jessica Schriver! We expanded our in-house expertise with two new additions to our development team — Norbert Preining and Deyan Ginev. With their deep knowledge of software development and LaTeX to HTML conversion, they will help arXiv better continue our accessibility work with HTML papers, as well as contribute to the arXiv tech modernization and migration to the cloud.

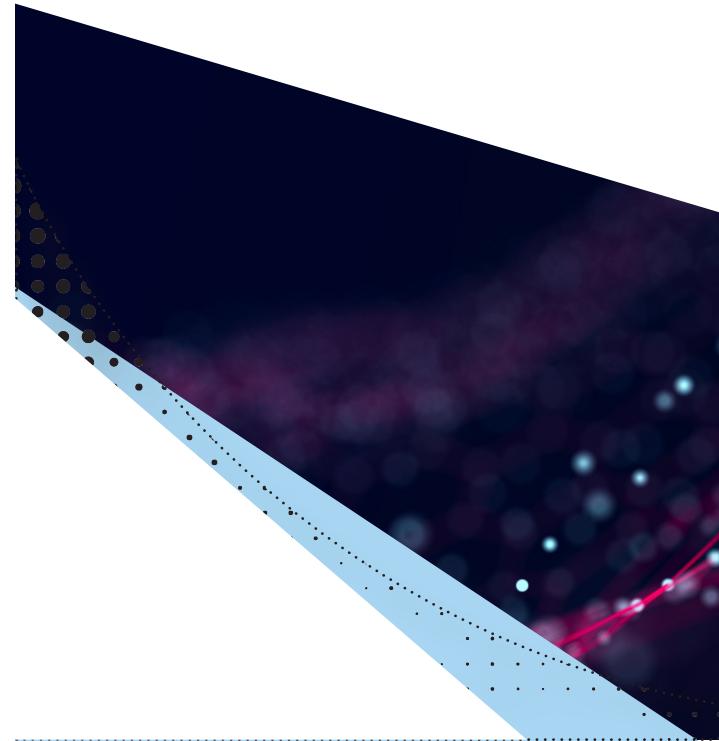

A champion of open science, arXiv is proud of the steps taken this year to build a strong foundation and strategy for anticipated future growth.

Financial Overview

arXiv enjoys a diverse funding stream that allows us to maintain stable operations. Our general operational funding is composed of the Simons Foundation's ongoing contribution to arXiv's operations, in-kind contributions from Cornell University, membership fees from library and consortium members and affiliates, and donations from sponsors and individuals.

arXiv finances are supplemented by grant funding, which also supports research endeavors related to improving functionality of the service. The Simons Foundation's generous three-year gift to fund our technology migration is allowing arXiv to take the steps it needs to ensure that we are operating in a reliable technology environment now and into the future. Our fiscal year 2024 and midyear fiscal 2025 financials, outlined in the following pages, provide more details on our funding streams and activities.

arXiv Budget 2024-2025

	FY24 (Actuals)	FY25	
REVENUE		(Budget)	(Actuals, 12/31)
Gifts and Member Contributions	\$ 1,491,111	\$ 1,716,000	\$ 252,849
Cornell Contribution (In Kind) ¹	\$ 759,569	\$ 2,559,748	\$ 402,611
Sponsored Funding	\$ 2,001,934	\$ 2,431,377	\$ 1,374,511
Other Income ²	\$ 108,796	\$ 140,000	\$ 114,302
TOTAL REVENUE	\$ 4,361,410	\$ 6,847,125	\$ 2,144,263
EXPENSES			
Personnel Expenses			
Total Personnel Expenses	\$ 3,152,628	\$ 3,596,498	\$ 1,713,722
Non-Personnel Expenses			
Services - Technical	\$ 107,508	\$ 115,000	\$ 91,805
Services - Professional	\$ 227,259	\$ 352,000	\$ 231,149
Services - Legal	\$ 1,536	\$ 5,000	\$ -
Meetings and Travel	\$ 49,508	\$ 75,000	\$ 33,492
Other General Expense	\$ 28,247	\$ 30,000	\$ 5,414
Other Sponsored Activity ³	\$ 270,616	\$ 844,060	\$ 116,707
Indirect Costs ¹	\$ 977,093	\$ 2,268,308	\$ 672,934
Total Non-Personnel Expenses	\$ 1,661,766	\$ 3,689,368	\$ 1,151,501
TOTAL EXPENSES	\$ 4,814,393	\$ 7,285,866	\$ 2,865,224
TOTAL NET OPERATING	\$ (452,983)	\$ (438,740)	\$ (720,961)

¹ Indirect costs covered by Cornell include those for Administration, Staff Support (Finance/Budget, HR, Facility, and Staff IT), and Facilities (maintenance, custodial, utility, and other facility related costs for the building).

² Income from merchandise, interest on gifts, etc.

³ Targeted funds for sponsor-approved activity via NSF and Simons Foundation.

Fiscal Year 2024

(July 1, 2023 – June 30, 2024)

arXiv performed according to its established budget for fiscal year 2024. The FY2024 budget reflects the first of three years of sponsored funding from the Simons Foundation to migrate arXiv to the cloud and complete related work to update our code base. The increase in personnel expenses corresponds with hiring on the arXiv development team to work on the technology migration. We budgeted to use operating reserves in fiscal year 2024 while we work on expanding our funding base.

Fiscal Year 2025

Midyear Performance

(July 1, 2024 – December 2024)

As of December 2024 (midyear FY2025), personnel expenses are tracking budget and nonpersonnel expenses are slightly behind budget. While arXiv operates on a July through June fiscal year, our membership program operates on a calendar year cycle, and most invoices go out in the first months of the new year. With this in mind, the level of gifts and member contributions received year to date are as anticipated. We expect to meet budgeted gift and member contributions by the end of FY25.

Looking Ahead

(January 2025 – June 2025)

The fiscal year 2025 budget includes an increase in Gifts and Member Contributions, which reflects library consortium members who are renewing their agreements and paying for three years of membership in the current year. The budget again reflects a deficit to allow us to maintain the staffing necessary to maintain momentum on technical and other projects.

Membership and Donation Report

Membership is critical to arXiv — not just in terms of funding but also for stakeholder engagement, stability, and independence. The program accomplishes three very important objectives:

- Provides opportunities for stakeholders around the world — libraries, universities, and research institutions — to invest in arXiv
- Platforms stakeholder voices through the Institutions Advisory Board, an important branch of arXiv's new governance
- Contributes a significant portion of arXiv's operating budget

In fiscal year 2024, membership fees from libraries and consortia were responsible for 52% of arXiv's revenue from gifts and member contributions. By becoming arXiv members, hundreds of institutions around the world have made a strong statement in favor of open access, open science, and sustainable academic publishing. Members include 290 institutions and 10 consortia from 28 countries.

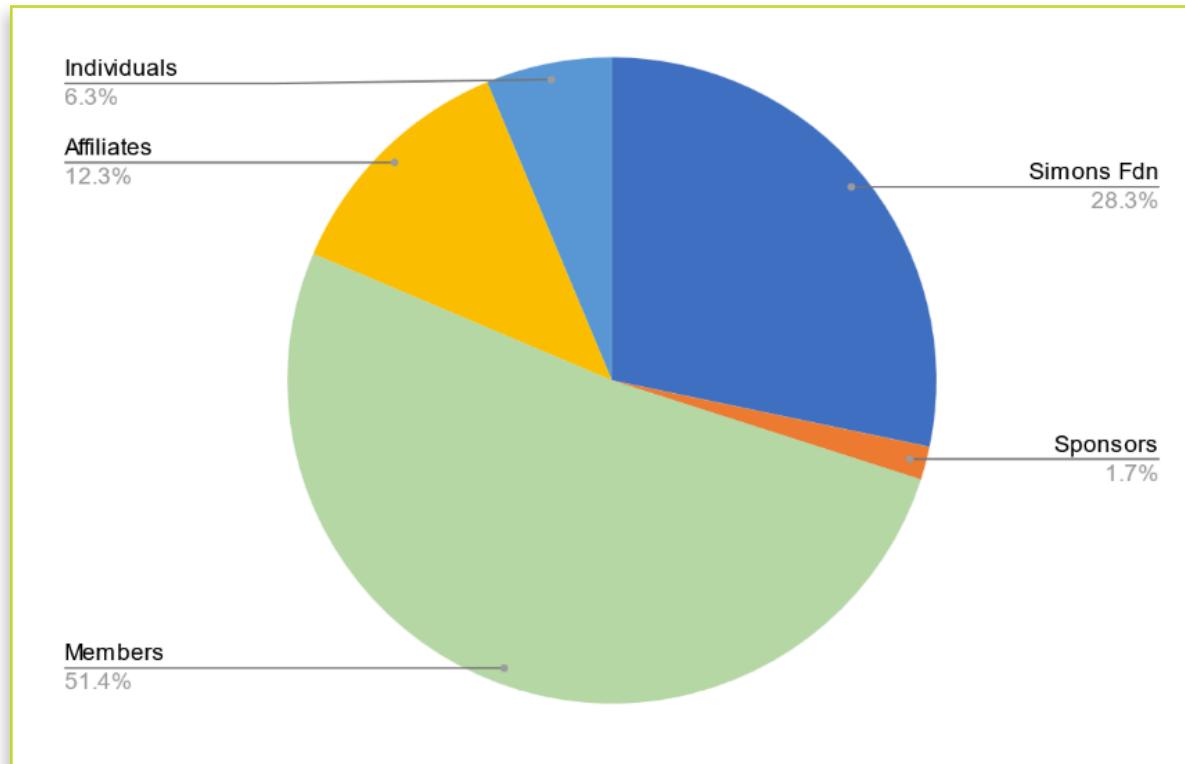

arXiv was accepted to SCOSS's third funding cycle in 2021, which bolstered support internationally for arXiv for three years (2022 – 2024). While 2024 was arXiv's final year as an active fund with SCOSS, arXiv will remain a part of the SCOSS family of essential open science infrastructures and work to further strengthen the fundraising landscape for open science.

The SCOSS family of infrastructures work together to promote open science, attract funders, and strategize growth.

In addition to fees from the academic and research library community, gift and member contributions include fees from affiliates (professional societies, government agencies, and other nonprofits), sponsors, and major funding, such as Simons Foundation and Cornell University. Organizations and individuals from 67 countries support arXiv through financial contributions.

Individual givers make up a small but growing slice of the funding pie. Anyone can make a donation to arXiv at any time through our giving portal, and arXiv works to make sure individuals who are passionate about supporting arXiv have every opportunity to do so. 2024 was the second year that arXiv participated in Cornell University's Giving Day, where we raised over \$26,000 in a single day, with over 300 total donors to arXiv — a record for us!

arXiv's membership program is based on average institutional submission rates to arxiv.org and continues to provide a significant portion of arXiv's operational funding. In 2022, 2023, and again in 2024, funding from arXiv members made up over half of the donations to arXiv.

Welcome,
new Champion Members!

University of Toronto

University of Texas at Austin

University of Washington

Yale University

Johns Hopkins University

Generous Additional Funding

In 2023, arXiv was so grateful to have received generous additional funding from both the Simons Foundation and the National Science Foundation. These gifts and grants, totaling \$10 million in all, are distributed over three-to-five year periods and are essential to help arXiv modernize our technology and continue to improve the accessibility of our corpus.

In 2024, a portion of the Simons Foundation gift allowed us to hire two new developers, add new expertise to our team, and move forward on foundational projects.

Flexible Options for Membership

arXiv continues to improve its membership program by providing flexible membership tiers for institutions to invest in arXiv at levels that fit their changing budgets, allowing them to give more when they can. This includes our Champion membership program, which has been in place since 2022.

Champion members of arXiv are institutions who lead the global research community in support of open access, and this membership program acknowledges their increased support of arXiv. The arXiv Champion membership program grew over 50% in 2024, welcoming five new members. Future plans for flexible membership include continuing to expand the Champion program and introducing new flexible tiers.

arXiv's 2023 – 2025 Roadmap for Change

While arXiv has been a pioneer in open access for over 30 years, as the landscape of scholarly communications and open research is constantly evolving, so too must arXiv.

In 2024, arXiv continued to work on its 2023 – 2025 Roadmap for Change, the outcome of our consulting engagement with Invest in Open Infrastructure (IOI), which began in 2023 and was supported by the Simons Foundation. The roadmap was created with significant input from stakeholders across staff and governance and established the following goal areas:

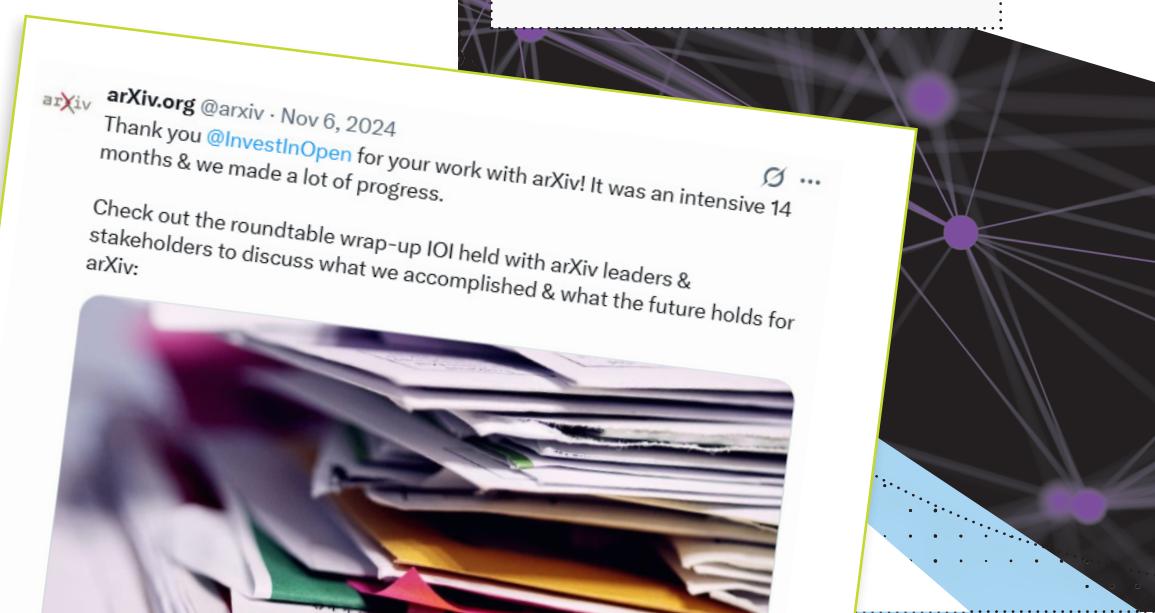

- Strengthen arXiv's Work Environment
- Enhance Organizational Resilience and Stability
- Strengthen arXiv Functions

During the first half of 2024, arXiv worked on several work packages with input and support from IOI. The engagement with IOI ended on June 30, but arXiv's work on the projects identified by the roadmap continues on.

In August, IOI held a roundtable conversation with key arXiv voices, including our council chairs and our program director.

Some highlights of our 2024 Roadmap accomplishments and future goals are:

- *an in-person team-building session for the arXiv staff*
- *creation of a metadata working group, with next steps in place for improving arXiv's metadata schema*
- *beta testing of new features for the arXiv Check tool used by editorial and user support staff and moderators*
- *a proposal for a new arXiv classifier, with proof of concept work underway*

arXiv in Practice

Stable, Fast, Built for Interoperability

- Editorial and User Support
- Technical Modernization
- arXivLabs

What makes arxiv.org tick?

arXiv in theory is a simple idea — research should be fast, free, and open to all. Every day, arXiv delivers exactly that: cutting edge research available at the click of a button.

arXiv in practice is anything but simple. Researchers trust arXiv not just because we've been a pioneer in open access for over 30 years but because the dedicated team of arXiv staff, governing councils, and volunteers working tirelessly behind the scenes make “arXiv in theory” a reality every day. This effort includes our leadership team, technical and development team, and user support and editorial staff, as well as the generous volunteer support of moderators and arXiv community tool builders.

Researchers start their day turning to arXiv for inspiration, discovery, and seminal papers in their field. arXiv users know — new ideas appear on arXiv first.

arXiv staff and volunteers take being entrusted with this body of knowledge seriously, not only making sure that research findings are disseminated quickly so they can be shared broadly, but working diligently to ensure that research is discoverable, properly preserved as part of the scholarly record, and accessible to all.

It's not just the research results available on arxiv.org that inspire — it's the collaborative, global effort of the entire open science community to collect, protect, and disseminate this knowledge for all.

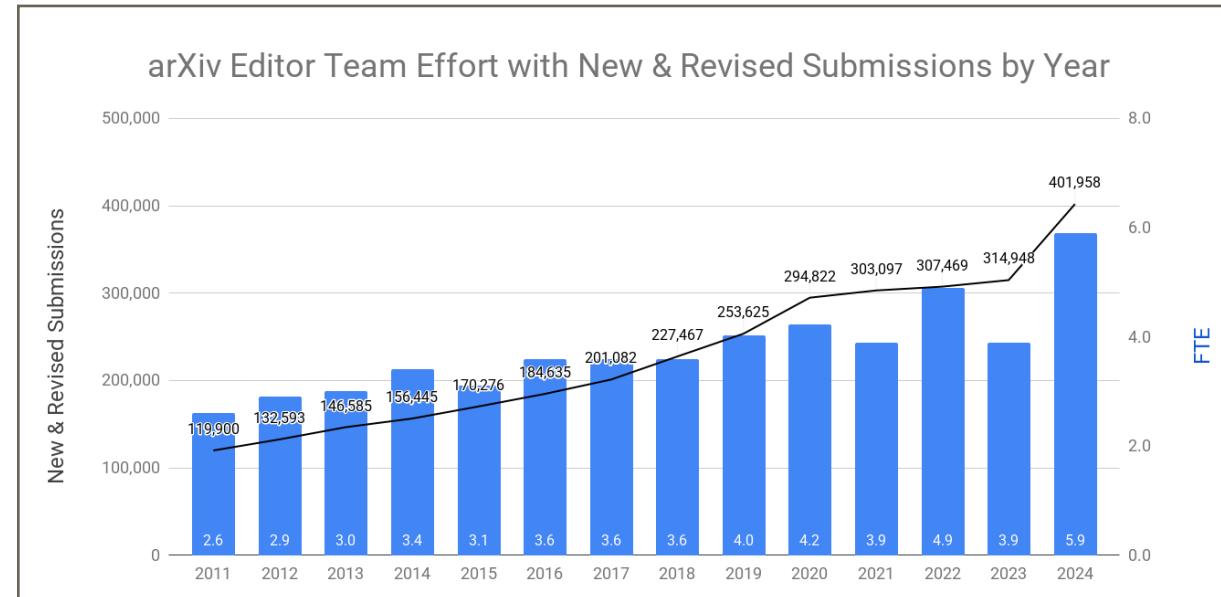

The image shows a Twitter thread with two tweets. The first tweet is from **arXiv** (@arxiv) dated Mar 5, 2024. It reads: "Studies show that lack of arXiv can cause: 😡 anger, 🥺 helplessness, 😨 existential dread, 🤯 intrusive thoughts of changing your field of study. If you or a loved one are experiencing lack of arXiv, please call 1-800-WHY-ARXIV-WHY." The second tweet is from **Jordy de Vries** (@Jordy_de_Vries) dated Mar 5, 2024. It reads: "(Sorry for the late mailing - we're working on it!) No Arxiv today? What is the point of waking up!?" Below the tweets are engagement metrics: 9 replies, 37 retweets, and 248 likes.

Editorial and User Support

arXiv's editorial and user support team (EUST) curates submissions for moderation and technical standards. In addition to arXiv's scientific director, six staff members and several part-time students balance team resources against scale and speed, as well as quality assurance goals and service goals. This year, we welcomed 33 new volunteers to the existing moderation team, while saying farewell to 20, with a total of 218 current moderators.

Submissions are announced five days a week for nearly the entire year, with small breaks for staff rest and retreat. Even traditional holidays are covered at least partially by staff — science never sleeps! Each day that papers are announced, new submissions number anywhere between 650 and 1,300. An additional 450 to 1,000 other types of submissions, such as replacements or cross-listings, are also handled by the team.

Working Smarter to Meet Demand

The arXiv editorial and user support team have made several improvements to their workflows to handle the ever-increasing submission load. This includes:

- Working with the arXiv development team to build tools tailored to support moderation, editorial and user support
- Introducing automated QA checks as standard screening for all submissions, as well as improving ethics and integrity checks
- Creating two distinct teams — editorial and user support — to better streamline workflows for growing areas, such as appeals, and create room for specialization and learning
- Improving author communication around holds, providing clarity and documentation

A Record Year

In 2024, the majority of the year arXiv saw months with over 20,000 new submissions.

October 2024 broke the record for most submissions in a month, with 24,226 new submissions.

arXiv also passed 2.5 submissions total in 2024.

In a five-year period (2020 – 2024) total submission to arXiv grew by 20%.

For the arXiv editorial and user support team, an increase in submissions means a corresponding increase in everything else — revisions, withdrawals, appeals, and author disputes. Increasing submissions also affect moderation, with high paper-to-moderator ratios increasing both the number and length of moderator holds. Many categories on arXiv need additional moderators to handle the increasing volume of submissions.

Editorial and User Support Team Effort—2024 at a glance

2024 by Month	New Submissions	Help Tickets
January	18,095	3,112
February	19,481	3,138
March	20,332	3,257
April	19,761	3,387
May	21,076	3,273
June	20,099	2,897
July	21,794	3,568
August	17,451	2,901
September	20,569	3,523
October	24,226	4,067
November	19,951	3,381
December	21,206	3,384
Total	244,041	39,888

Technical Modernization

arxiv.org has been providing open access to research papers for decades. In the over thirty years since its founding, usage of arXiv has risen dramatically (to say the least). In 2023, arxiv.org averaged 300,000 hits per hour. In 2024, that number is closer to 2.5 million. arXiv is now, more than ever, a critical infrastructure for the scientific community — and usage will only continue to rise. The arXiv technical team's goal is to continue to meet this need while simultaneously supporting new features and integration within the scholarly communications landscape.

2024 was the third year of the arXiv-CE (“Cloud Edition”) project to move all arXiv services to the cloud. The goal of arXiv-CE is to improve stability and capacity, ease expansion into new subject categories, and allow easier integration with other services. In 2024, the arXiv development team reached its goal of serving nearly all of our read-only services from the cloud. This included serving abstract pages, PDFs, HTML, source code, and our RSS feeds. This has set us up well for the next stage, which is to finish moving the entirety of arXiv’s services, including account maintenance, submissions, moderation, and article announcement to the cloud in 2025.

Development, UX, and EUST — arXiv Check!

arXiv runs lean and moves fast — with a lot of moving parts to support open research, it is essential to work together as a team to build tools that help us meet the increasing demands of the scholarly communications ecosystem and the needs of arXiv users.

In 2023 and 2024, arXiv development, user experience (UX), and the editorial and user support team (EUST) all worked together to lay the groundwork for arXiv Check, a new tool for the editorial and user support team and arXiv’s volunteer moderators. By the end of 2025, arXiv Check will be fully deployed, in addition to other support modules, such as updated guidance, an improved onboarding process for moderators, and new communications channels.

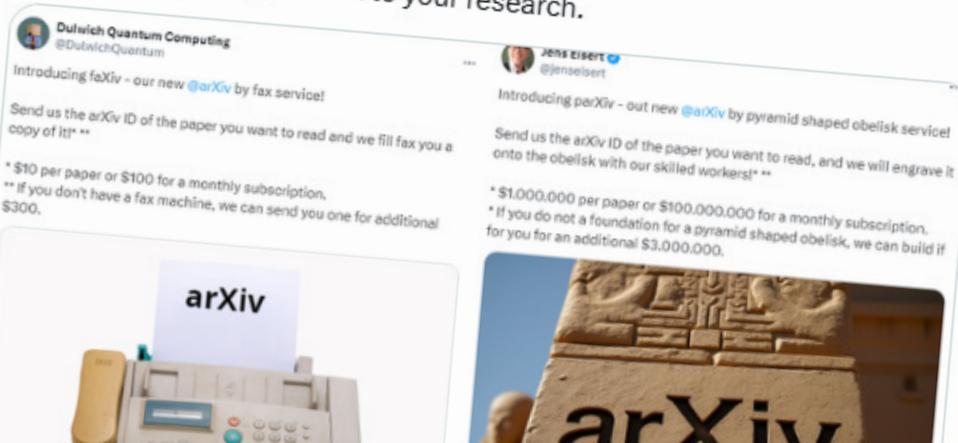

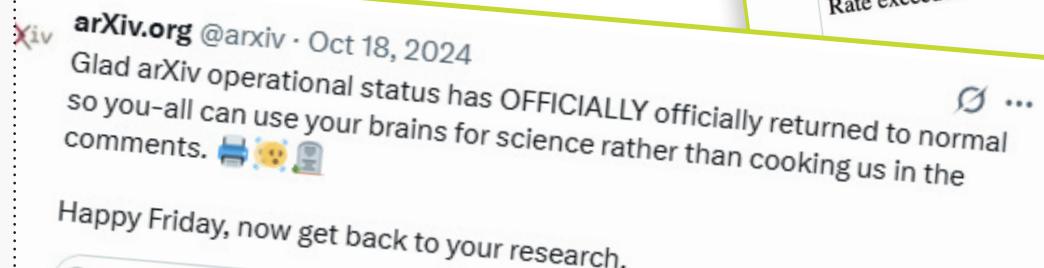

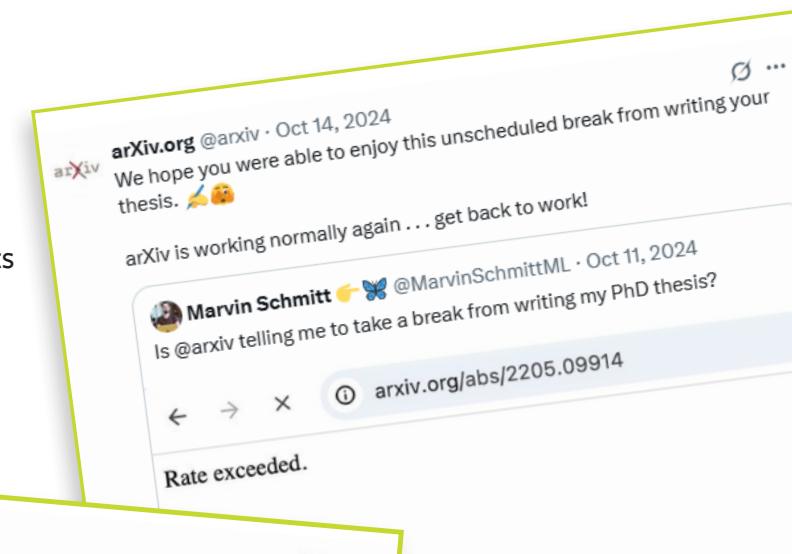

arXiv vs. the 'bots

While usage of arXiv has naturally increased over the years, one of the reasons we see a large jump in usage recently is due to the rise of Large Language Models (LLMs). The arXiv corpus — with over 2.6 million scientific articles — is highly useful for training LLMs, and so some of the load increase is due to robotic harvesters. In October 2024, arXiv experienced a surge in harvesting that interrupted arXiv services for many users. Thankfully, this was mitigated by the progress arXiv has made in modernizing our tech stack, as well as support from Fastly and their in-kind donation of Content Delivery Network services to arXiv.

arXiv was built by scientists, for scientists — human scientists, that is! One of the many goals of Milestone 1 is to fortify and streamline our services so we are better prepared to face challenges like this in the future, and continue to provide unmatched service for (human) arXiv authors and readers.

A critical component of the arXiv-CE project is moving our services entirely off of Cornell University's infrastructure — this goal is also known as Milestone 1. Milestone 1 completion is projected for the end of fiscal year 2026. The completion of this milestone will allow arXiv to integrate and expand new and useful features, many of which our community has been requesting for a while, such as:

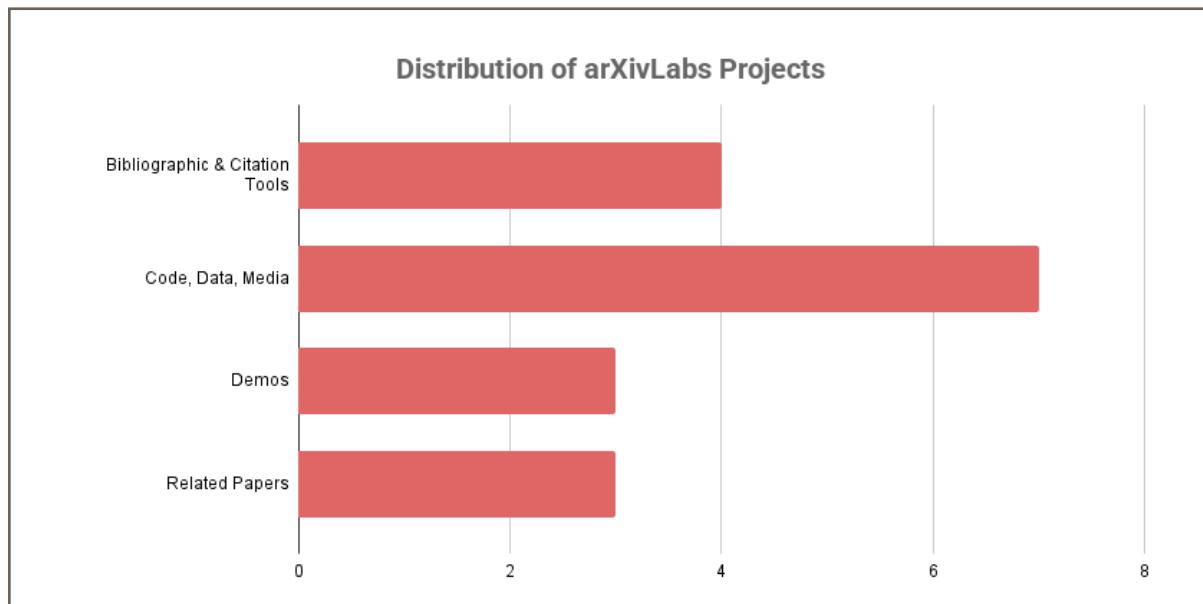

- Improved metadata and submission
- arXiv category splitting and expansion
- arXiv UX customization
- QA automation improvements
- User support fully integrated into arXiv
- Expanding accessibility features through improved HTML and offering other formats
- Support of the overlay journal ecosystem

Community Tool Building with arXivLabs

To some, arxiv.org is just a website. But that is only the tip of the iceberg. arXiv was built for scientists, by scientists, with the goal of being truly open and accessible. This openness has resulted in an incredibly vast corpus — that anyone can access! With more than 2.6 million articles hosted on arxiv.org, arXiv represents an immense source of information, and this information is made available to all by public APIs.

arXivLabs is our framework for integrating community-built tools into the arXiv platform. These tools offer researchers the opportunity to explore related content, discover code implementations and more, right from an article's abstract page. arXiv currently integrates tools in four areas: 1) related papers and recommenders, 2) bibliography and citations, 3) code, data, and media, 4) related demos.

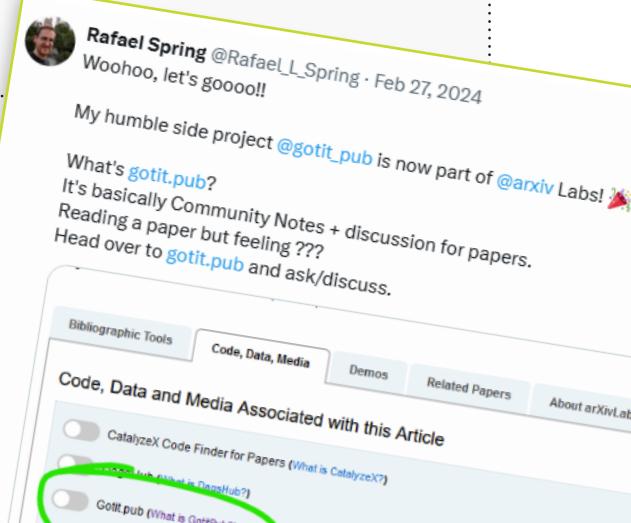

2024 Lab Highlight

- *Gotit.pub*
- *Creator: Rafael Spring*
- *Purpose: Gotit.pub is a tool to help speed up understanding of new techniques through the power of networked communities. Gotit.pub provides a meta discussion-layer for all open access articles on arXiv by allowing readers to comment directly, with highlights to the PDF, keeping questions clear. This allows the community and the author to engage in conversation, leading to better understanding of the work presented.*

"I believe there is no bigger 'boost' to the relevance of a piece of research than for it to be openly discussed and fully understood."

—Rafael Spring

In 2024, we worked on improving and streamlining the arXivLabs process, with the goal of encouraging the integration of fully formed tools to arXiv, while reducing the load on our staff who review each proposed project. We updated the arXivLabs page on our website, with more clearly defined project expectations, submission guidelines, and documentation.

arXiv currently has 14 arXivLabs active, with five tools added in the past two years. In 2025, we expect three more in-process Labs to go live, with a few Lab partners updating their offerings.

arXiv in the Community

*Inclusive, Engaged, Leading the Way in
Open Science*

- Accessibility and arXiv
- Annual Brand Perception Survey
- Outreach
- Conferences and Thought Leadership

arXiv is more than just a website.

Nothing exists in isolation. Research is an increasingly interconnected endeavor, whether it's sharing data and code, collaborating across institutions, or breaking down the silos between academic disciplines to find new common ground and ideas.

arXiv is all about connecting the dots — connecting people to ideas, connecting scientists to new discoveries, and connecting research to the world. arXiv helps scientists share research quickly and openly, which means we serve as an essential connection point for not only ideas, but for institutions and organizations that value equitable and open research.

arXiv will always keep the scientific community and its needs top of mind. This means listening to researchers from all walks of life, promoting transparency, and maintaining open lines of dialogue through several communication channels, including newsletters, social media, focus groups, and surveys.

arXiv also engages the scientific community at conferences and through thought leadership and presentations. arXiv is an important voice in the open access community, and we use our voice to lead the discussion, amplify the voices of underserved communities, and make the changes necessary for science to be truly open and accessible to all.

In 2024, the arXiv team traveled far and wide to learn, teach, and promote open science!

Accessibility and arXiv

In 2024, we held arXiv's second Accessibility Forum. Learning from last year's forum, which took place over four hours on just one day, this year we hosted seven individual sessions in September, each on their own day. This allowed each session ample time for presentations, panel discussions, and audience Q&A without being rushed. Like last year, this year's forum was free and open to all.

2024 Sessions

- Keynote: Universal Designs for Research
- Ask me anything: A lively Q&A on navigating academic ecosystems with a disability
- AI and accessibility: A demonstration of two research-based tools
- Deaf Hub at RIT: A resource for all of us
- Sonification: Why multi-modal science is the future
- SciELO y accesibilidad / e acessibilidade (en Español y Portugués / em espanhol e português)
- HTML papers on arXiv: A peek under the hood with LaTeXML and NVDA

Milestones and firsts

We strove for accessibility in many ways and achieved a number of milestones and firsts for arXiv:

- We hosted our first session with American Sign Language as the primary language.
- Also hosted our first non-English session in Spanish and Portuguese.
- We tested a new format for the first time: hosting multiple stand-alone sessions instead of one longer event.
- We worked with 32 panelists! They are living in 8 countries across 4 continents, including significant panelist representation from South America, the Middle East, and Australia.
- Over half of our panelists (53%) have a disability themselves.
- Our panelists represent 28 organizations including 12 universities and 7 academic organizations. Nine other organizations (including arXiv) span critical open publishing technologies and other businesses.
- One last small-but-important milestone is that we hosted our first session that was friendly for Asia-Pacific timezones and not focused on the European-North American timezone band.

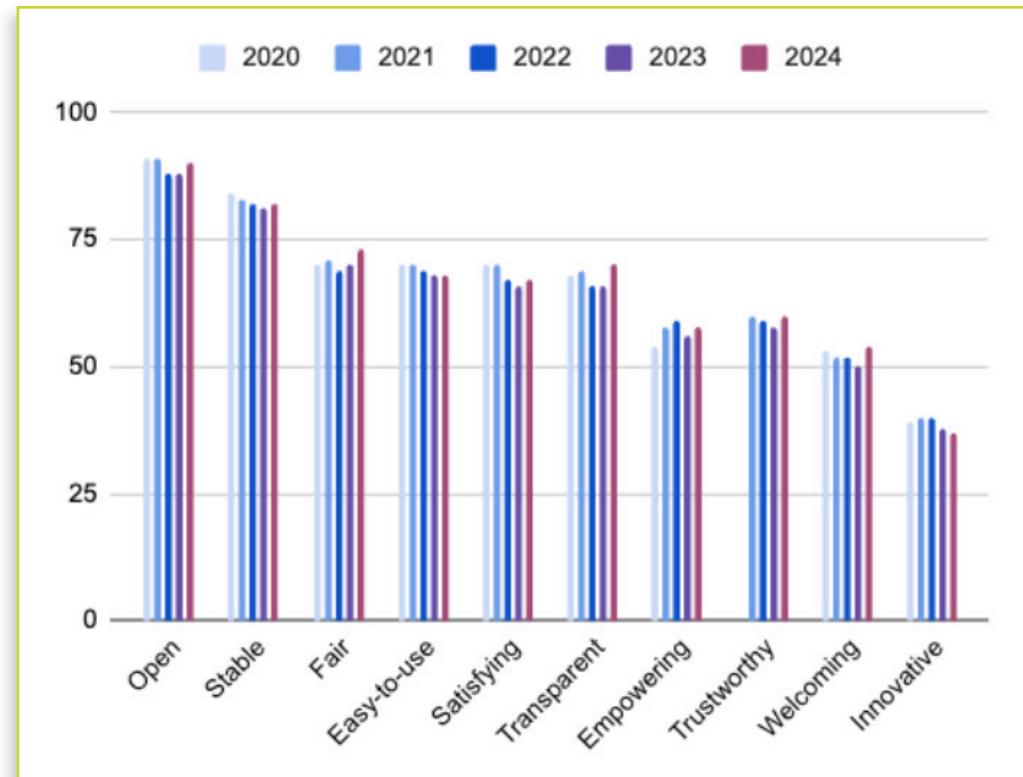

Annual Brand Perception Survey

Open lines of communication and feedback are essential to arXiv operating as a trusted community resource. Every year we ask arXiv users to answer a brief survey to help us understand how arXiv is perceived by the global scientific community at large. This annual assessment also helps us track how these sentiments may be changing over time and how our actions impact that.

In our Annual Brand Perception Survey (BPS), we ask community members how closely they associate arXiv with ten crucial attributes. In 2024, we received over 10,000 responses! This year, we ran the survey for two weeks, rather than 24 hours, with a less intrusive survey banner across all arxiv.org pages.

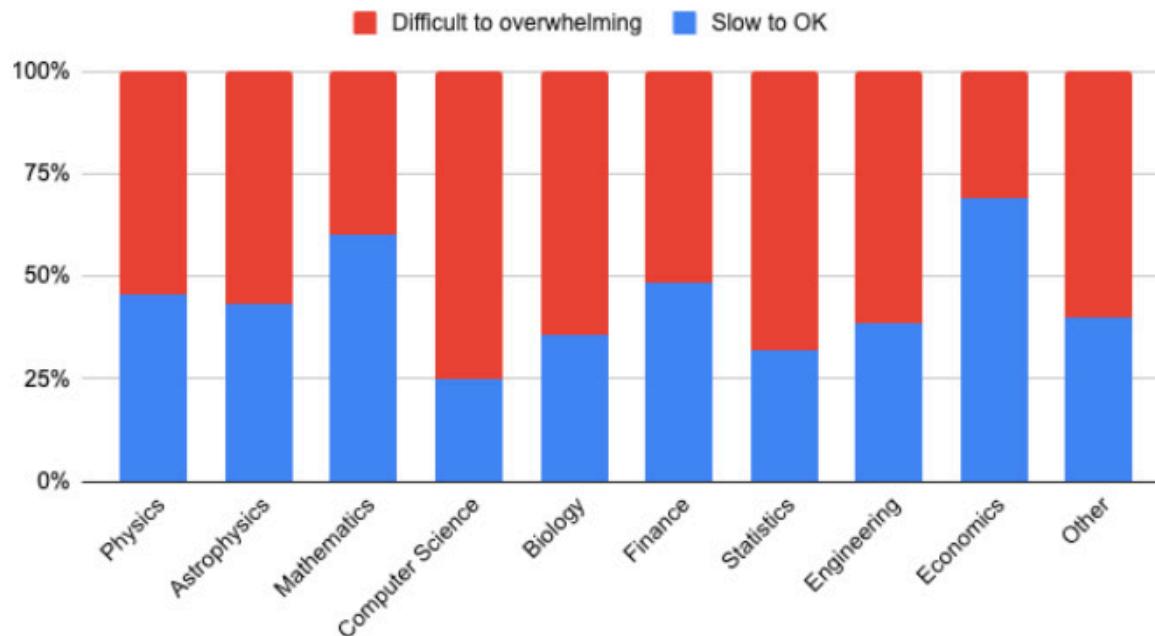

arXiv perceived attributes are on the rise — both “Welcoming” and “Transparent” increased positively four full points! The only attribute we saw fall was “Innovative” — Is it time for arXiv to increase communications around special projects? Or is arXiv simply **too** integral to research communications and too established as an infrastructure for the past 33 years to be considered innovative?

The Pace of Scientific Research

Each year we ask respondents one special question. This year it was: “How hard is it to keep up with the pace of publishing in your field?” For most fields, the majority response is that it is “Difficult” or “Impossible” to keep up, with Computer Science leading the way.

How hard is it to keep up with the pace of publishing in your field?

How can arXiv help researchers better keep up with the research in their field?

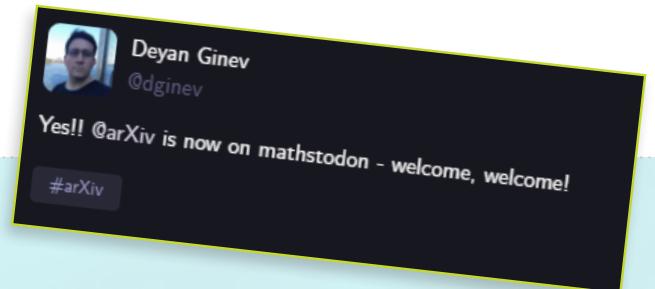

- Subscribing to arXiv emails on new papers
- Splitting categories for more digestible, personalized reading
- Creating and integrating tools that help readers and authors find the research they need

Outreach

arXiv keeps the lines of communication open. At the end of 2023, arXiv launched a LinkedIn account as an additional channel for dialogue with the community. In 2024, arXiv joined both Mastodon and Bluesky in an effort to reach scientists in the digital communities where real dialogue about open access and topics affecting research were taking place.

X (formerly Twitter) was the first social media channel arXiv joined and remains our channel with the most followers, but our other audiences are growing quickly.

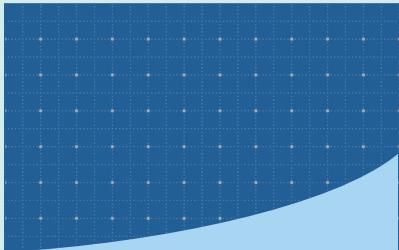

arXiv goes where researchers go — we will continue to change, grow, and adapt our media channels to best reach the scientific community and maintain an open dialogue with the people who make arXiv possible.

arXiv's social channels

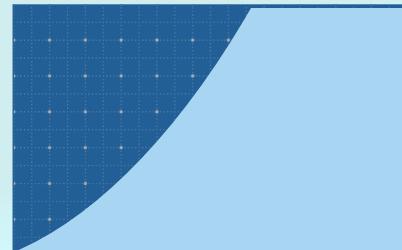

X (formerly Twitter)

- Launched 2016
- 40K followers
- 15% follower growth over 2023

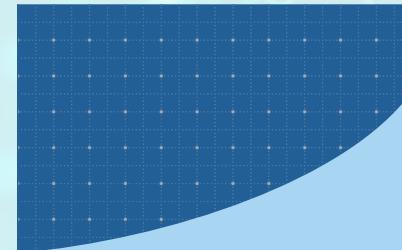

LinkedIn

- Launched 2023
- 4K followers
- 300% follower growth over 2023

Mastodon & Bluesky

- Launched 2024
- 100+ followers gained
- Projected to grow 50% by 2025

Conferences and Thought Leadership

Researchers wake up with arXiv. More than just a digital repository, arXiv is a trusted brand that is integrated into the daily work of researchers around the world. Digital and in-person events are an opportunity for arXiv to strengthen our brand presence and keep the conversation going. It's also a great way to highlight the team of people making arXiv work behind the scenes. arXiv also uses these events to collaborate with our partners, educate stakeholders on open access, and present the work we are doing to improve arXiv and the open access ecosystem.

In October 2024, arXiv celebrated Open Access Week by collaborating with our friends at Creative Commons, bioRxiv, and medRxiv to talk about choosing a license to amplify the impact of preprints. This webinar was free to all with the goal of educating researchers how best to choose a license when submitting their work.

arXiv.org @arxiv · Oct 26, 2024
#OAWeek spotlight: #accessibility & arXiv

Being truly #openaccess means creating equitable access for all, regardless of disability.

Thank you to the volunteers, ASL interpreters, disability advocates & all in the scientific community who work to make arXiv more #accessible.

arXiv ACCESSIBILITY FORUM 2024
September 2024
Free, virtual, and open to all

Accessible research is important to me because...

FOSSASIA Summit @fossasisag · Mar 11, 2024
Norbert Preining @norbusan Principal Software Engineer at @arXiv #CornellUniversity will give a talk on "#OpenSource driving #OpenScience at arXiv" at #FOSSASIASummit2024 in #OpenTech track on April 10, 02:10 PM. Learn more about this session at: eventyay.com/e/55d2a466/session

Zoom Webinar
How to Choose a License to Amplify the Impact of your Preprint
Wednesday, 23 October 2024
Noon - 1:30PM ET

Researchers, librarians, and scientists are invited to discuss open licensing with Creative Commons licenses and recent updates from preprint servers arXiv, bioRxiv, and medRxiv. Learn about preprint deposit, license selection, Fair Use, copyright, and publishing your research, and celebrate International Open Access Week 2024!

Even if you can't attend, register to receive resources.

Register!

YEAR OF OPEN SCIENCE CULMINATING CONFERENCE MARCH 21-22, 2024 CONVENED BY COS CENTER FOR OPEN SCIENCE

arXiv's important work in accessibility was the “talk of the town” at several conferences this year — we were proud to be asked to share our work on accessibility and arXiv HTML papers at several webinars and conferences this year (including in person in Japan)!

arXiv also exhibited in person at two conferences this year. In November, we attended the first joint meeting of National Society of Black Physicists and National Society of Hispanic Physicists in Houston, Texas. In December, we attended the American Geophysical Union's Annual Meeting in Washington, D.C. — our second year at this 25,000+ attendee conference.

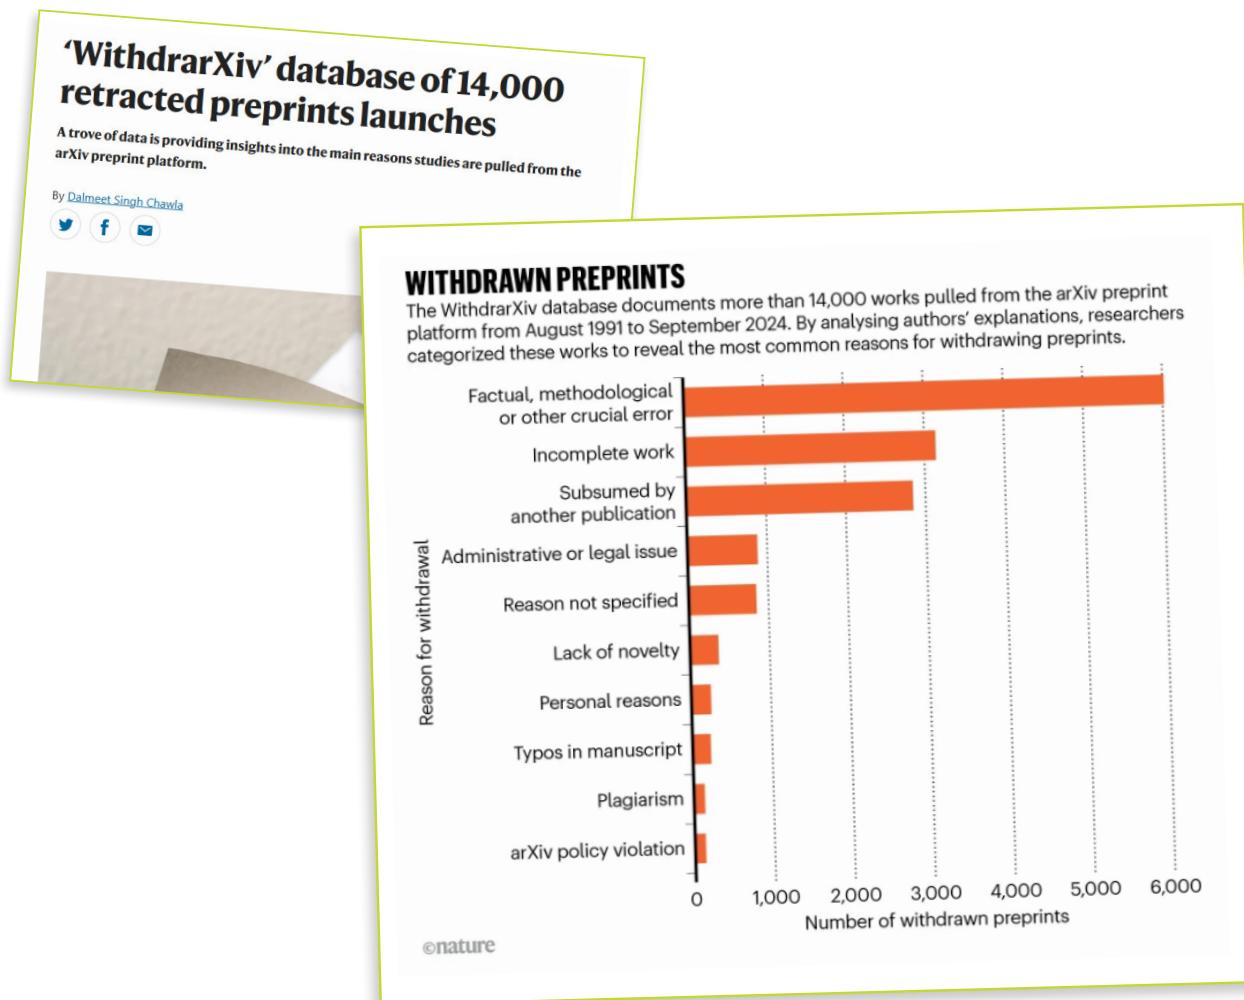

We're so grateful to be able to meet the scientists who use arXiv both virtually and in person and talk about everything that makes open science possible!

All About Accessibility | arXiv's 2024 Presentations

- “HTML at arXiv: Why Flexible Formats are Important for Equitable Access to Open Science”
Year of Open Science Culminating Conference Lightning Talk
- “Accessibility in Research: HTML papers on arXiv”
Coalition for Networked Information (CNI) Project Briefing Series
- “More Access, Alternatives to PDF”
National Information Standards Organization (NISO) webinar
- “HTML papers on arXiv - why it is important, and how we made it happen”
Digitization and E-Inclusion in Mathematics and Science Conference (DEIMS2024) paper presentation
- “The Future of Open Science: arXiv's Role in Making Research Accessible”
FOSSASIA Summit 2024 Featured Speaker

There's more to engaging with the scientific community than conferences, webinars, and presentations! This year, arXiv researchers, staff, and collaborators launched WithdrarXiv: A Large-Scale Dataset for Retraction Study.

WithdrarXiv is the first large-scale dataset of withdrawn papers from arXiv, containing over 14,000 papers and their associated retraction comments spanning the repository's entire history through September 2024. Through careful analysis of author comments, arXiv helped develop a comprehensive taxonomy of retraction reasons, identifying 10 distinct categories ranging from critical errors to policy violations.

WithdrarXiv

Purpose: A novel use of the arXiv dataset (using all public information!) to categorize withdrawal reasons and also produced a “corpus” — that is to say, a dataset which other researchers can use to continue the research.

Creators: Delip Rao, Jonathan Young, Thomas Dietterich, Chris Callison-Burch

Thank You to Our Supporters

It takes a lot of wonderful people to make arXiv work.

For our funders, sponsors, affiliates, and members, we are so appreciative of your financial support, as well as your insight and belief in the arXiv mission.

Our staff, volunteer moderators, and advisory councils give their time, dedication, and expertise to arXiv every day. We are so grateful to have this talented community help usher arXiv and open science into the future.

Please join us in thanking all who make arXiv possible.
